open-source platforms

Artificial Intelligence

- we can define AI as the ability of machines to “mimic” some cognitive abilities of humans, such as solving problems or learning a particular activity.
- Everything is AI

Machine Learning

- Algorithms and statistical models that have the ability to learn from examples.

Neural Networks

- Mathematics models analogous to a human brain

Neural Networks

Deep Learning

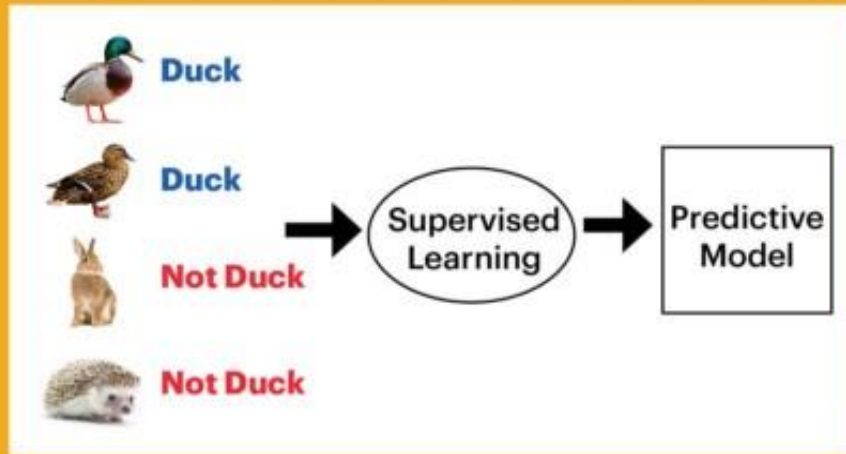

- Neural networks with many hidden layers
- LeNet: 7 layers
- VGG-16: 16 layers
- Inception-v3: 48 layers

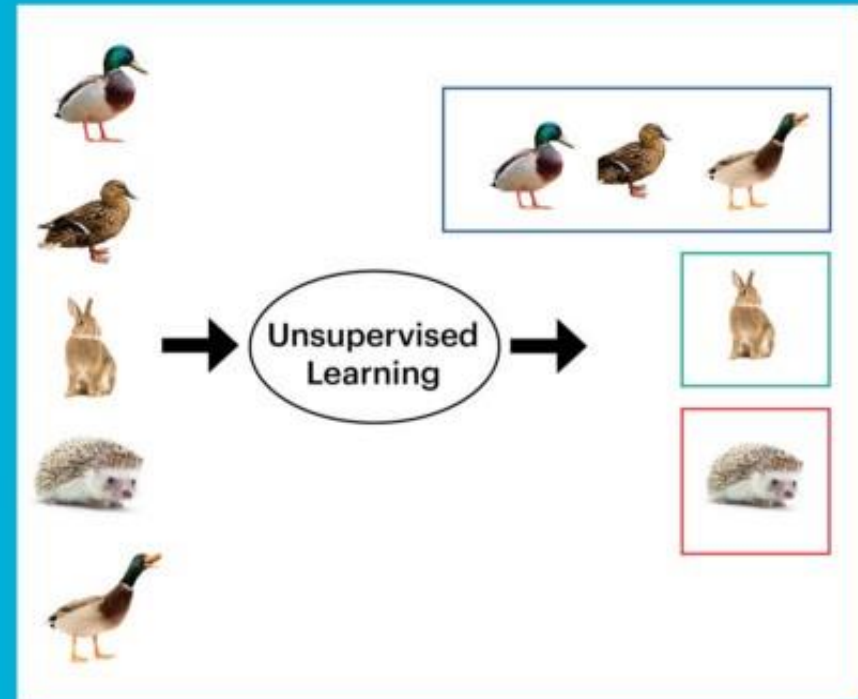

Machine Learning Categories

- **Supervised Learning**- each sample of the training set must consist of the desired input and output pairs for the model to be trained
- **Unsupervised Learning**- group unlabeled dataset into classes that follow some pattern

Supervised Learning (Classification Algorithm)

Unsupervised Learning (Clustering Algorithm)

- **Reinforcement Learning** - Reinforcement learning differs from the others shown by not necessarily being trained with a previously collected dataset, but from the interaction of an agent with an environment. The goal of the RL model is to choose a given action that maximizes the reward in a specific state. Thus, during training the algorithm will explore the environment through agent actions so that after several iterations it recognizes the best action to take for each situation.

Q-learning, Policy gradients

AI, ML, DL

Deep learning:

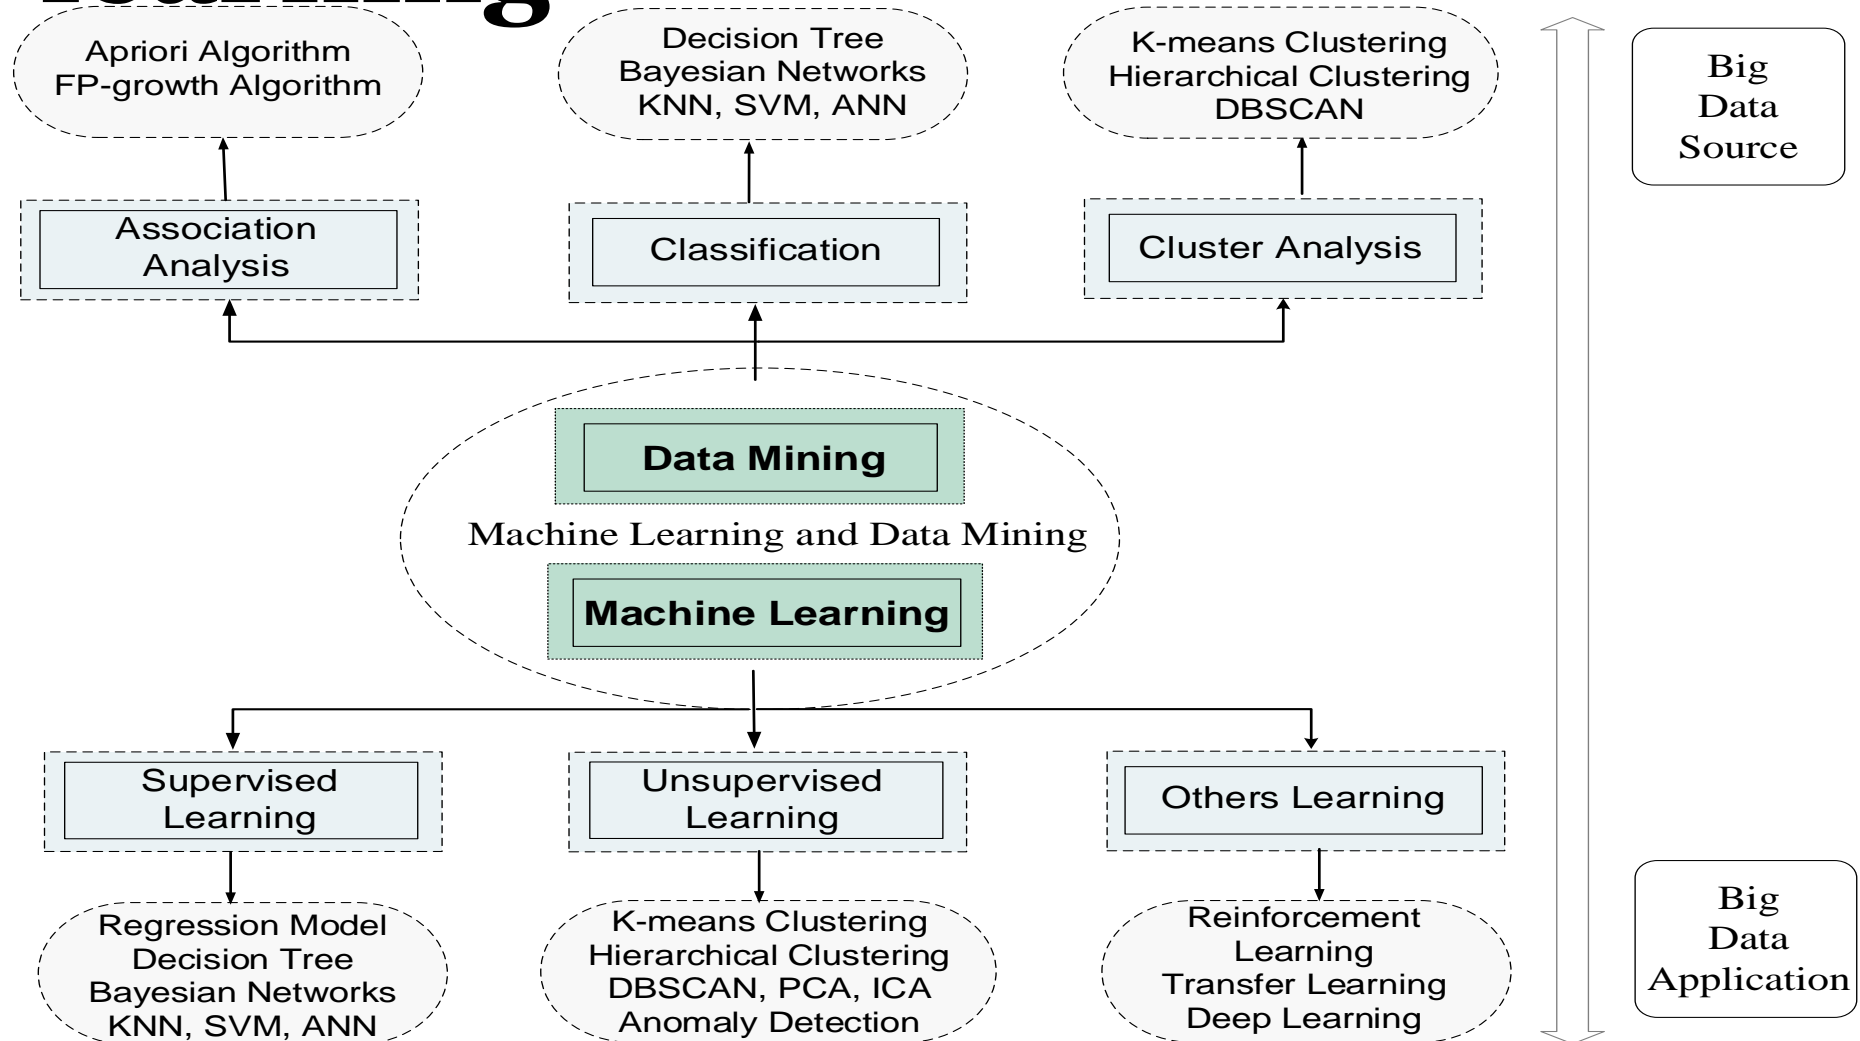

1. Conventional neural networks (CNN)
2. Recurrent neural network (RNN)
3. Long Short-Term Memory (LSTM)
4. Generative Adversarial Networks (GANs, 2014)(生成式對抗網路, very popular recently)
5. Reinforcement learning (強化學習)—AI for game playing, Robot

Machine Learning:

1. Regression
2. Decision tree
3. Support vector machine
4. Artificial neural network
5. Deep learning
6. Clustering
7. Bayesian algorithm
8. Genetic algorithm
9. Nature-inspired algorithms
10. Association rules
11. Regularization (to prevent overfitting)
12. Ensemble algorithms

Data Mining and Machine learning

Machine Learning Methods

(a) Regression Algorithm

(b) Instance-based Algorithm

(c) Regularization Algorithm

(d) Decision Tree Algorithm

(e) Bayesian Algorithms

(f) Clustering Algorithms

(g) Association Rule Learning Algorithms

(h) Artificial Neural Network Algorithms

(i) Deep Learning

(j) Dimensional Reduction

(k) Support Vector

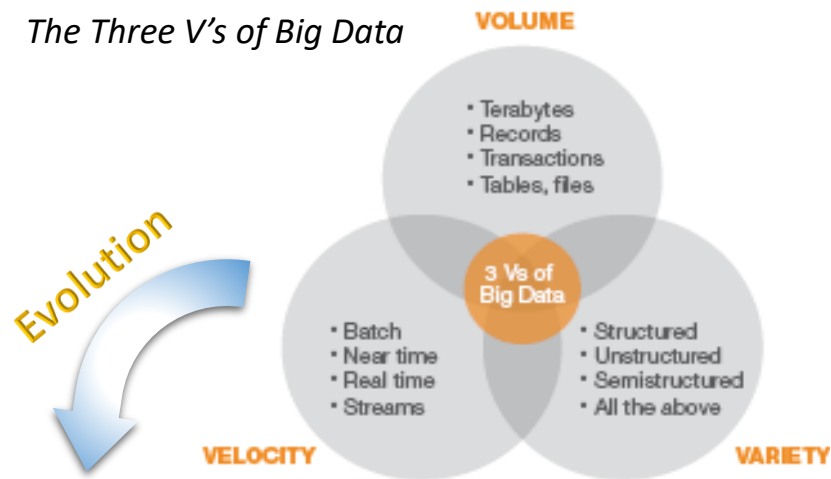

(l) Ensemble Algorithms

The *Five V's* of Big Data

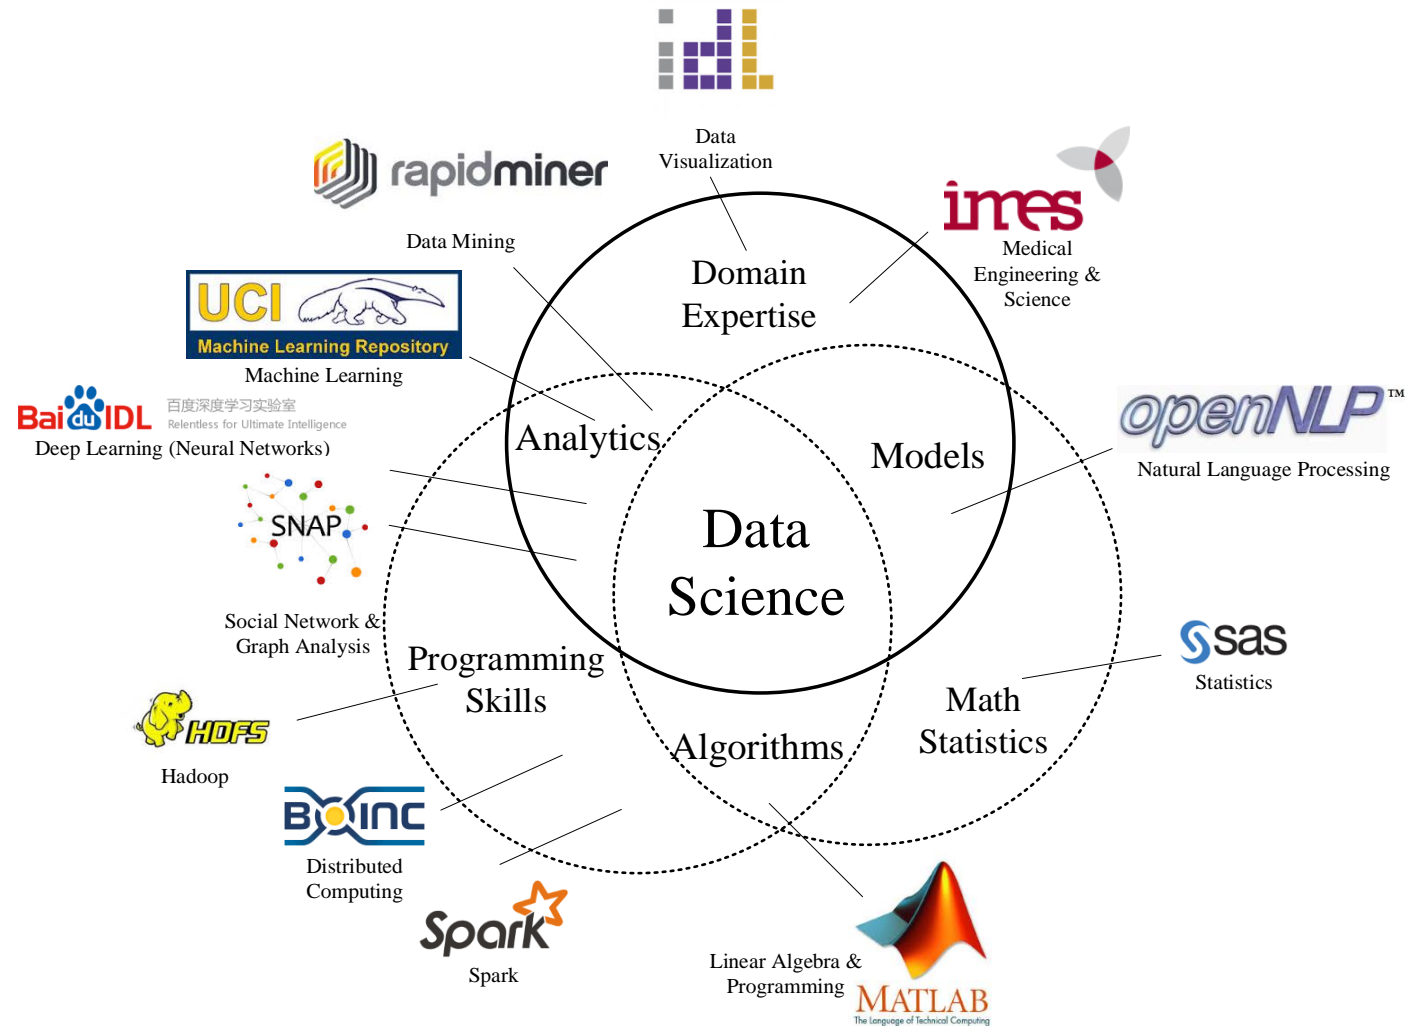

The Four V's of Big Data

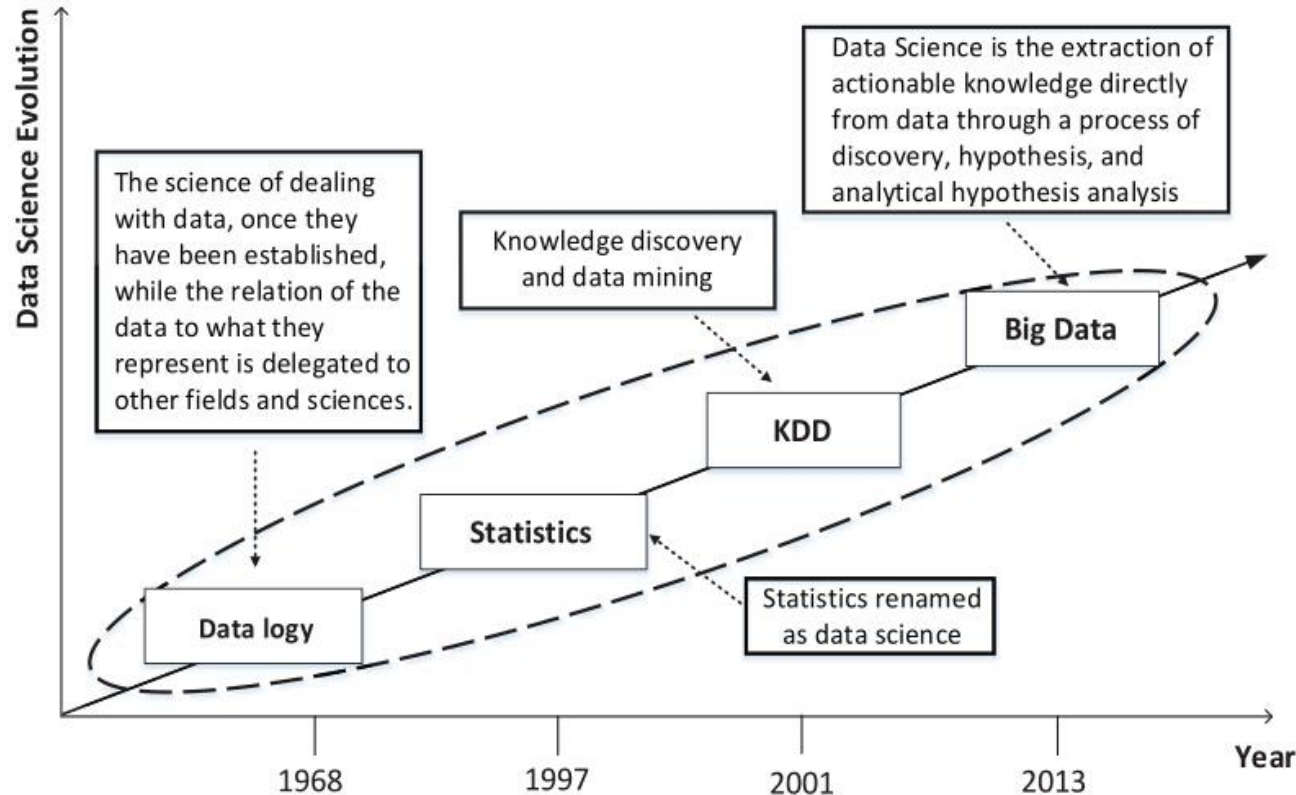

What is Data Science ?

- **Data Science** is the extraction of actionable knowledge directly from data through a process of discovery, hypothesis, and analytical hypothesis analysis.
- A **Data Scientist** is a practitioner who has sufficient knowledge of the overlapping domains of expertise in business needs, domain knowledge, analytical skills and programming expertise to manage the end-to-end scientific method process through each stage in the big data lifecycle.
- **Big Data** refers to digital data volume, velocity and/or variety whose management requires scalability across coupled horizontal resources

Functional components of data science supported by some software libraries on the cloud in 2016

The Evolution of Data Science

The evolution of data science up to the big data era

- Summarized below are some **open challenges** in big data research, development and applications.
- Structured versus unstructured data with effective indexing;
 - Identification, de-identification and re-identification;
 - Ontologies and semantics of big data;
 - Data introspection and reduction techniques;
 - Design, construction, operation and description;
 - Data integration and software interoperability;
 - Immutability and immortality;
 - Data measurement methods;
 - Data range, denominators, trending and estimation.

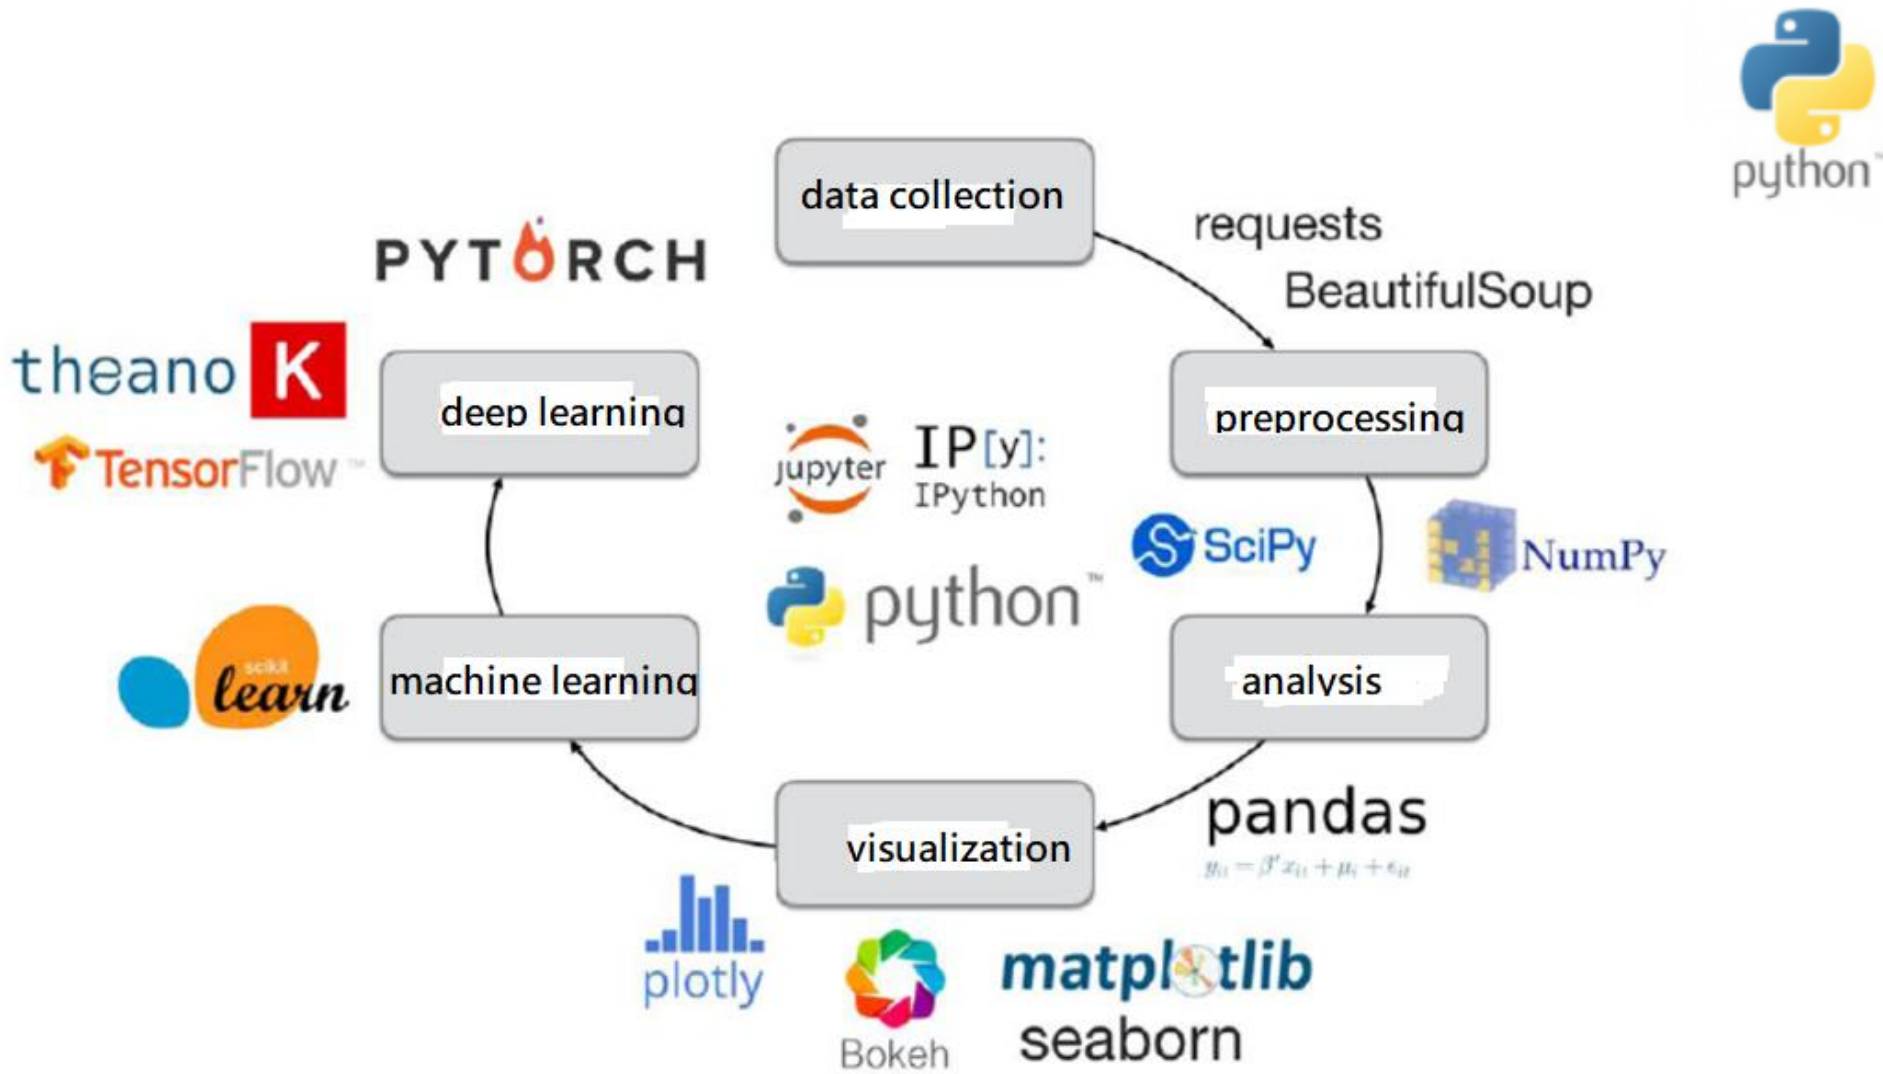

AI definition is vague?

- When you're fundraising, it's AI. When you're hiring, it's ML. When you're implementing, it's logistic regression. —everyone on Twitter ever
- Due to the advance in deep learning, some define...

AI= Deep Learning + Big Data

- In March 2019, three Deep Learning Masters---
Jeoffery Hinton, LeCun Yann and Yoshua Bengio won
the Tuning Awards

& Machine Learning

Recent breakthrough of AI

2015/12

Vision

Microsoft in ImageNet Competition (ILSVRC) Reduces the error rate to 3.57%, better than human eyes.[1]

Deeper Neural Networks

2016/3

Gaming

AlphaGo beats Go champion Lee with 4 games to 1; beats Chinese Champion Ker with 3 to nothing (2017/4)

Deep Reinforcement Learning 、 Monte Carlo Tree Search

2016/9

Machine Translation

Google Translate use “Neural Machine Translation” technology to translate natural languages achieves the quality of human translation [3]

End-to-End Learning 、 Deep LSTM (Long Short-Term Memory) Network

2016/10

Speech Recognition

Microsoft speech recognition tech. reduces the error rate to 5.9%, which is the level of a human expert.[4]

CNN (Convolutional Neural Network) 、 RNN (Recurrent Neural Network)
